Software Engineer (Backend, Cloud & AI)

Software Engineer specializing in **backend systems, cloud platforms, AI-driven applications, and DevOps**, with hands-on experience owning and evolving production systems. Technical owner of a large-scale distributed backend system, responsible for backend development, production operations, incident response, and CI/CD automation. Strong focus on **system reliability, technical ownership, adaptability, and continuous learning**.

Work Experience

Cloud Platform Engineer
TrendAI

Taipei, Taiwan
Apr 2025 – Present

- **Sole technical owner of a large-scale legacy distributed backend system** powering an automated malware-submission and detection pipeline. Responsible for backend development, production operations, incident response, and CI/CD automation while maintaining integrations across multiple departmental services and ensuring reliable, low-latency processing.
- Developed the first version of an **LLM-powered Retrieval-Augmented Generation (RAG)** system using **Azure services**, enabling precise knowledge retrieval and context-aware responses with direct references to source PDFs for answer traceability and verification.
- Built data-processing workflows to transform **unstructured seller-submitted case data** into structured datasets for the **AI knowledge base**, while also working with broader company databases to support analytics and operations.

Cloud Developer Intern
eCloudValley Digital Technology

New Taipei, Taiwan
Jul – Oct 2024

- Analyzed and visualized complex datasets to deliver actionable business insights.
- Designed and developed an **interactive cloud-based analytics dashboard**, hosted on an **AWS Linux server**, with interactive data visualizations and analytics using **AWS services**.
- Integrated an **LLM-powered chatbot with agents grounded in the company's database** to enhance data analytics and improve user interactions within the dashboard.

Research Assistant
Mobilizing Information Technology Lab, NTUST

Taipei, Taiwan
Aug – Dec 2023

- Developed and integrated new features into a virtual assistant program written in **C#**.
- Enhanced **GUI design** using **XAML** to ensure seamless integration with newly added features.
- Fine-tuned and evaluated **machine learning models** for **image classification** using **Scikit-learn** and **PyTorch** in a Linux environment.

Skills

Technical Skills:

Languages: Python, Java, C/C++, C#

AI & LLM: Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Agentic AI, Multi-Agent Systems

Cloud & Infrastructure: AWS, Azure, Kubernetes, Linux

Databases: PostgreSQL, MySQL

DevOps & Tools: Git, GitHub, CI/CD, GitHub Actions

Collaborative Skills:

Technical leadership, Ownership and accountability, Cross-functional collaboration, Stakeholder management, Technical communication, Incident response and resolution, High-priority issue management, Team-based problem solving, Adaptability in fast-paced environments

Education

B.Sc. in Computer Science and Information Engineering
National Taiwan University of Science and Technology

GPA 4.16/4.3
Sep 2021 – Jan 2025

- Specialized in **data structures, software development, AI integration, and DevOps practices.**
- Delivered end-to-end software projects, integrating AI-driven functionality within full-stack development environments.
- Frequently assumed **technical leadership roles** in team projects, coordinating system design, project lifecycle planning, task breakdown, and cross-functional integration.
- Worked alongside faculty staff as a **Teaching Assistant for Data Structures**, developing C/C++ programming assignments, examination design and grading, and providing in-class explanations of core data structure concepts and theories to help students grasp key concepts and reinforce algorithmic thinking.

Key Project: DubSync – Multi-Model AI Lip Synchronization System

Description: a **multi-model AI pipeline** that synchronizes dubbed audio to live-action video, supporting **multiple faces** and **dynamic speaker detection**.

- **Led end-to-end project execution** by defining system architecture, project scope, development phases, requirements breakdown, and integration strategy.
- Coordinated regular team meetings to drive communication, task allocation, and cross-module integration, ensuring aligned model outputs and runtime performance.
- Successfully delivered a working end-to-end demo, showcasing accurate multi-actor lip synchronization and gaining experience in model orchestration, performance trade-offs, and real-time system constraint

Awards & Achievements

112 & 113 傑出僑生獎學金 Scholarship Award

Taipei, Taiwan

- Awarded by Overseas Community Affairs Council (Taiwan)
- Awarded to top achievers among Overseas Chinese undergraduate students nationwide in Taiwan

1st Highest Achiever for Academic Records in Science Major

Bandung, Indonesia
Average Score: 92

- Awarded by Bintang Mulia High School (Indonesia)
- Awarded for achieving the highest total score in Science Major

1st Highest Achiever for National Exam in Science Major

Bandung, Indonesia
Average Score: 96.75

- Awarded by Bintang Mulia High School (Indonesia)
- Awarded for achieving the highest total score in National Exam testing

Languages

- **English:** TOEIC 990/990 – Professional Working Proficiency
- **Chinese:** HSK 4 – Limited Working Proficiency
- **Indonesian:** Native Proficiency
